### **DETAILED ACTION**

1. The preliminary amendment filed November 12, 2003 has been received and entered.

### ***Information Disclosure Statement***

2. Applicant's prior art citation filed January 09, 2004 has been received, considered and placed of record.

### ***Double Patenting***

3. Claims 33-37 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over of U.S. Patent No. 6,678,580.

Although the conflicting claims are not identical, they are not patentably distinct from each other because U.S. Patent 6,678,580 has all the features of the invention but it does not teach explicitly the first control system and the second control system is operable to control the rate of flow of the product to the field in response to a prescription map requiring variable application of the product; however, U.S. Patent 6,678,580 teaches multiple agricultural implements having multiple control systems receiving multiple inputs to provide variable flow rate of the product to the ground. Therefore, it would have been obvious to one skilled artisan in the art to have made the apparatus having the first control system and the second control system is operable to control the rate of flow of the product to the field in response to a prescription map

requiring variable application of the product to provide the appropriate amount of product to the field.
